

How to successfully engage with Informa TechTarget's award-winning editorial teams

IN LATE 2024, Informa and TechTarget brought together TechTarget’s targeted technology websites, Industry Dive’s vertical industry news publications and Informa Tech’s storied media brands under one house. The combined newsroom of Informa TechTarget contains over 300 world-class business journalists and many of the best publications in B2B media.

Our editorial mission is to help executives stay ahead of the curve. Whether navigating new technologies, regulations or market dynamics, senior executives need information and insight they can trust to make smart business decisions and do their jobs. Our journalism attracts and engages highly targeted professional audiences across 30+ technology segments and 45+ industry verticals.

Because of the scale and scope of our editorial organization, here are tips on how to work effectively with the Informa TechTarget team.

The mission: Industry brands

The Informa TechTarget newsroom features industry publications with storied histories and powerful brands in the markets they serve. From longstanding brands that have chronicled their industries for decades—and, in the case of WardsAuto and American City & County, over a century—to the Dive publications that rose to the top of B2B media in the 2010s, our industry publications are trusted and relied upon by millions of loyal readers.

Our newsroom of journalists report on the most notable developments, challenges, innovations and disruptions in our markets. We tailor our coverage to the needs of senior executives in the industries and professions we serve. We report the news and trends that could significantly affect business in the future and deliver insight that helps executives make sense of the evolving business landscape.

Our journalism affects the markets we serve on a daily basis. We break news, track important trends and provide our readers with critical analysis of the storylines shaping our industries. Our reporting is regularly cited in industry reports, congressional hearings, regulatory filings and legal proceedings. Our publications have been regularly recognized with the most prestigious awards in business-to-business journalism—including the American Society of Business Publication Editors’ Website of the Year award, the Neal Awards’ Best Industry Coverage award and much more.

Our publications are steadfastly committed to accurate, fair and impartial coverage of the sectors we serve. Our publications clearly delineate news coverage from sponsored content and our journalism is free of any influence from advertising or business considerations. Readers who come to our publications trust us to provide reliable industry information that they cannot get anywhere else.

The mission: Technology sites

Since 1999, TechTarget’s editorial staff has built a network of technology-specific websites to provide valuable problem-solving and decision-support content to IT professionals and line-of-business managers. The company’s editorial mission was founded on the premise that enterprise tech buyers need definitive practical guidance and insight when implementing, researching and managing technology. We were among the first media companies in the B2B technology space that took the unique approach to build sites dedicated to targeted topical areas. These sites are run by veteran editors and journalists who create thousands of articles each year.

Every day, millions of technology professionals rely on TechTarget’s network of sites to consume

300+

Editors

20+

Discrete industries
and technologies

100+

Sites

60,000

Pieces of original
content annually

news analysis; read useful tutorials, how-tos and tips; and consume in-depth features and vendor product comparisons. Our sites feature various multimedia formats, including webcasts, podcasts, videos and screencasts, as well as opportunities to interact with experts and their peers. Our unique editorial formula provides readers with independent analysis, original reporting, access to a network of industry experts and links to numerous useful resources across an editorial taxonomy of over 10,000 technology topics.

Our reporters and editors are dedicated to delivering content that provides practical information to readers who need insights into technologies they have invested in or plan to invest in. All TechTarget editorial content is entirely vendor-neutral and the content on each site is tailored to a specific IT professional audience as well as a growing line-of-business audience. We balance our tech coverage by examining not only the benefits of technologies, but the downsides, the costs and how to innovate while supporting legacy systems, as well as how top vendor products compare.

Taken together, the valuable information we provide our readers helps them make wiser IT buying decisions over the course of the purchase and implementation process. Our “news you can use” strategy means our news content is always timely but includes comments from technology users, industry experts, consultants and analysts who provide perspective for busy IT professionals. We’ll fast-track major announcements to keep readers informed and up to date on breaking news, but we’ll add to the story and provide the necessary context. As such, TechTarget’s editorial team strives to cover the technology industry in a fair and balanced manner. This means our editors compare technology

vendors and their products to provide our readers with unbiased information about the tools they are considering. Much of our editorial content includes the pros and cons of a technology, the various options available and feedback from analysts and technology users. Finally, because products are the foundation to any technology implementation, our team produces product comparisons, as well as keeps track of noteworthy new product announcements.

Our commitment to editorial integrity

First and foremost, our commitment is to fulfill the information needs of today’s technology buyer in an unbiased and vendor-neutral way. It is also our mission to partner with technology vendors for fair, balanced and accurate coverage that is not tied to any business relationship that TechTarget may or may not have. We pride ourselves in this separation of church and state.

Rules of engagement

To pitch a member of our editorial staff, it’s important to understand the site you are pitching to and the intended audience of that site. Reporters receive hundreds of press releases each day. Pitches that are more specifically tailored to that site’s audience and their IT pain points will generally catch the attention of a reporter over a blast email. In addition, try to establish a relationship with the reporter and offer customer and analyst references as part of any announcement. Understand that the reporter always needs to judge your news against other news happening within a given industry. An interview does not guarantee published content. Lastly, pitches sent under “embargo” with no prior agreement regarding that embargo will not be honored. ■

AI software and services

These sites focus on the latest trends and developments in AI, data science and quantum computing, educating executives, engineers, data scientists and product managers. They cover a wide range of topics including generative AI, machine learning, large language models, blockchain and quantum computing, as well as business applications, infrastructure and strategies. The platforms also delve into critical areas such as AI governance, regulation, cybersecurity and ethics. With content ranging from industry-specific insights to practical use cases, these sites educate readers on how to effectively implement and leverage these emerging technologies within their organizations.

Application development

The sites provide news, features and technical articles for professionals involved in software development, application architecture and software quality. The sites cover a wide range of topics including API design, programming languages, microservices, software testing and Agile/DevOps methodologies. They also offer insights on application design, the software development lifecycle and best practices for creating and maintaining software. With a focus on both technical expertise and practical advice, these platforms help software architects, developers, testers, DevOps managers and IT leaders stay informed and improve their skills in designing, building and testing critical software applications.

Business functions and applications

These sites provide targeted resources and insights for professionals across various business and technology sectors. They cover key topics such as content management, collaboration tools, digital media strategies and information governance for those managing digital content. For IT and business leaders, they offer in-depth coverage on enterprise resource planning (ERP) systems, including selection, implementation and supply chain management. Our HR sites focus on human resources, exploring how HR systems support talent management, employee experience and navigating workplace challenges like remote work and DEI. There are additional resources available for Oracle product users, with guidance on database administration, application management and development practices. Lastly, the sites offer original analysis and updates on social media trends and industry developments.

Healthcare and life sciences

These sites provide insight and analysis on various aspects of the healthcare and life sciences industries. They cover topics such as advancements in biotechnology and pharmaceuticals, clinical trials, drug pricing, FDA approvals and emerging research partnerships. The content also delves into health IT, including electronic health records, interoperability, clinical decision support and telehealth. Key areas of focus include healthcare policy, regulation, digital health, payer-provider partnerships, revenue cycle management, healthcare finance value-based care and precision medicine. From a technology perspective, these platforms explore AI, data analytics and healthcare security, focusing on data protection, HIPAA compliance and cyberthreats. The sites also cover medical technology, including medical devices and diagnostics, as well as the evolving landscape of patient engagement through virtual care, patient portals, education and remote monitoring. Together, our editors serve healthcare professionals, including administrators, providers, payers and tech leaders, offering crucial information to navigate the complexities of the healthcare and life sciences sectors.

Informa TechTarget International

Informa TechTarget's international editorial network brings a local focus to IT issues in key technology markets. Based out of London, Computer Weekly is one of the leading English-language tech publications in Europe, with an unparalleled legacy and brand recognition—it was the world's first weekly IT newspaper, launched in 1966. Now a digital brand, Computer Weekly's in-depth coverage of the challenges and trends facing IT leaders produces content and e-zines focused on the UK, Nordics, Benelux, Europe, Middle East, Southeast Asia, Australia and New Zealand. Based in Munich, ComputerWeekly.de brings regional audience knowledge for German-speaking markets. Paris-based LeMagIT.fr is one of the most successful B2B technology sites in France. Meanwhile, ComputerWeekly.es and ComputerWeekly.com.br provide insight for Latin American IT professionals in Spanish and Brazilian Portuguese. In addition, MicroScope is the leading website for executives in the UK IT channel.
